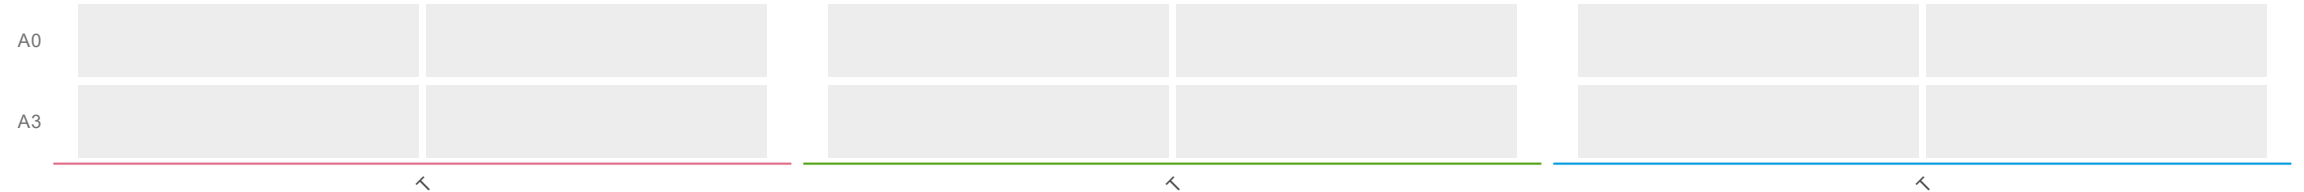
Interaction screening: treatment x modifier (Cox, DSS)



P ≥ 0.1

Left half: multiplicative interaction (ratio of HRs); right half: RERI. Estimates where P < 0.05: * P < 0.05, ** P < 0.01, *** P < 0.001.
Frame: grade A (solid stable, dashed not), grey grade X. Dash: not applicable; small circle: same data as an earlier combination.
